

TEAM NEUTRINO

Iowa Regional 2024

Robot Performance

After 80 qualification matches, Team Neutrino was seeded 23rd in the Iowa Regional, allowing us to be picked as the second team in the sixth alliance. Working alongside our alliance partners, we were able to make it through four rounds of semifinal matches before being eliminated. Thanks to our alliance partners, 525 and 2847!

Gracious Professionalism Award

Our team won the Gracious Professionalism Award for exemplifying the core values of FIRST and practicing gracious professionalism. Our pit reps communicated our STEM outreach efforts to judges, as well as our constant efforts to help other teams at competitions - two aspects that helped us in earning this award. We were happy to help out teams 8822, 8821, 5935, and 9543!

Scouting

With hard work and preparation over the build season, scouts on Team Neutrino collected qualitative and quantitative data through an app built by the team. This data ultimately helped us make decisions during alliance selection and strategize throughout the qualification and playoff matches.

Impact Award

The Awards subteam worked hard throughout the build season in order to prepare. Because it was our second time presenting this season, our presenters were able to learn from our first experience and improve! Overall, we were grateful for the opportunity to apply for the Impact Award at both regionals we attended and what we learned from it.
