

TEAM NEUTRINO

July/August Newsletter

4th of July Parade

On July 4th, Team Neutrino celebrated Independence Day by walking in the 4th of July Parade through downtown Ames. With 8,000 people watching, we both were able to present our robot and connect with the community.

Sponsor Visits

Over the course of July and August, Team Neutrino visited six sponsors and showcased what Team Neutrino does. Through these visits, we demonstrated our robot, presented about our team, got facility tours at certain locations (Bayer, Danfoss, and John Deere), and had meaningful conversations with employees regarding future career paths! **Thank you to all of our sponsors for your support!**

Iowa State Fair

On August 18th, Team Neutrino volunteered at the Iowa State Fair with Iowa 4-H. Members shared STEM by tending to various STEM stations such as a scientific Plinko experiment, a balloon launch, floating duck trivia, and others! The team also explored the fair which made for a great team bonding experience. Overall, we had a lot of fun at the Iowa State Fair!

Electrical Camp

Spanning the entire summer, Team Neutrino hosted eight training camps for new and aspiring students to learn more about Team Neutrino's subteams! From July 24th-26th, Team Neutrino held the Electrical Training Camp for those who were interested in the Controls subteam. During the camp, members engaged in hands-on activities of wiring and pneumatics and learned about what it takes to wire an entire robot.
