

# TEAM NEUTRINO

## November-December 2022 Newsletter

### Ames FLL Scrimmage

In the beginning of December, Team Neutrino volunteered at the Ames *FIRST* LEGO League (FLL) Scrimmage with *FIRST* TECH Challenge (FTC) Team Photon. All six FLL teams and Neutrino and Photon mentors attended the event. The FLL teams were able to experience judging and matches in a competition-like environment. After the matches, Team Neutrino and Team Photon presented future opportunities in *FIRST* to the community.

### ITEC and Boy Scouts Presentations

We presented to educators at the Iowa Technology Education Connection (ITEC) conference in Des Moines. We also demoed our robot to a local Boy Scout troop. It was so great to reconnect with our community and present about our team. We hope to continue building positive relationships and spreading the word of STEM. Thank you so much for everyone who volunteered and attended!

### Sponsor Goals

The fundraising subteam has worked hard throughout the summer and fall to help us afford all of our annual expenses. Recently, Team Neutrino reached our fundraising goal of \$40,000. This will enable us to attend two regional competitions and the World Championship next year. We greatly appreciate the support from all of our sponsors!

### Winter Party

On December 10th, Team Neutrino held our annual Winter Party. The fun festive event consisted of video game tournaments, cookie decorating, white elephant gift exchange, and team bonding. It was a blast and was a great opportunity for getting closer as a team outside of our regular environment. Additionally, the winter party helped us to show new members Team Neutrino's hospitality and friendliness.
