

TEAM NEUTRINO

November - December 2023 Newsletter

Team Neutrino Work Day

On November 10th and 11th, Team Neutrino members got together to prepare for the build season. Thanks to our hardworking students and mentors, important tasks such as disassembling past robots to setting up the new tool cart were completed in just two sessions! Swerve driver tryouts were also held during this time, and the team was able to choose two main drivers for the upcoming season.

FLL Scrimmage

On December 1st, Team Neutrino members were able to return to the Ames Middle School for the FLL Scrimmage to volunteer. This was a great opportunity for the team to stay involved with local Lego League teams, including ones mentored by Neutrino members. We had a great time showcasing last seasons robot and presenting at the scrimmage, as well as judging, timing, and announcing at the matches!

Mock Kick-off

In place of the usual team meeting on the 14th, Team Neutrino organized a mock-kickoff in order to prepare for the upcoming season. Here, students were able to demonstrate and practice skills accumulated from past years and summer projects, as well as strategize and get a chance to work together. New members were also able to get a feel for what kickoff is like with the Melody Melee CAD challenge.

Holiday Party

On the 16th, team members met at the Stewards' house for the annual Team Neutrino Holiday Party! Team members were able to relax and interact in one final bonding event before build season and kickoff. Neutrinos also participated in a white elephant gift exchange. Thanks to the Stewards for hosting this event once again!
